17. ABSTRACT (MAX. 250 WORDS)

A report on the additions (both new construction and rehabilitation) to the physical facilities of colleges and universities for 1959–60 and 1960–61. Data for 1959–60 are presented as part I and data for 1960–61 as part II.

This circular follows in chronological order *Progress in the Construction of Higher Education Facilities, 1951–59* (OE Circular No. 665). The compilations were made possible through data secured annually at the same time information is obtained for the recurring publications *Higher Education Salaries* and *Higher Education Basic Student Charges.*

At 5-year intervals, a more comprehensive analysis of higher education buildings will be compiled as a followup to a basic inventory of physical facilities that was begun in 1958. The initial inventory is being reported by the Office of Education as part 3 of the five-part *College and University Facilities Survey* series.

Highlights

Expenditures of $828 million for the construction of higher education facilities completed in 1959-60 and of $812 million in 1960-61 were reported by respondents in the two annual surveys. (For each year the respondents represented 76 percent of the higher education institutions queried.) Each of the amounts was larger than has been reported in any previous year since the series began in 1955-56. Distributed by cost between new construction and rehabilitation projects, 97 percent was spent for new construction in 1959-60 and 93 percent in 1960-61.

In 1959-60, the public institutions, with 61 percent of the total enrollment, made 64 percent of the total construction expenditures; in 1960-61, the public enrollment was still 61 percent of the total, but public institutions made only 59 percent of the expenditures.

Instructional, research, and general types of facilities received 54 percent of the total expenditures in 1959-60 and 59 percent in 1960-61. Expenditures for residential types of construction were 35 percent of the total in 1959-60 and 32 percent in 1960-61.

The North Atlantic region spent more than any other region in 1959-60, $236 million, but in 1960-61 it was the Great Lakes and Plains region which led with $258 million.

Sources of construction funds used by public institutions were mostly governmental (appropriations, direct taxes, and general obligation bonds), 61 percent in 1959-60 and 58 percent in 1960-61. For private institutions gifts and grants supplied 38 percent in 1959-60 and 43 percent in 1960-61. Revenue bonds supplied most of the remainder of construction funds in both years for both public and private institutions.

Foreword

The purpose of this publication is to report additions, both new construction and rehabilitation, to the physical facilities of colleges and universities for 1959-60 and 1960-61. This circular follows in chronological order Progress in the Construction of Higher Education Facilities, 1951-59 (OE Circular No. 665). These compilations are made possible through data secured annually at the same time information is obtained for the recurring publications Higher Education Salaries and Higher Education Basic Student Charges. Data for 1959-60 are presented as Part I of the present report and data for 1960-61 as Part II.

At 5-year intervals a more comprehensive analysis of higher education buildings will be compiled as a follow-up to a basic inventory of physical facilities that was begun in 1958. The initial inventory is being reported by the Office of Education as Part 3 of the 5-part College and University Facilities Survey series.

The periodic classification and publication of these data should offer continuing guidelines for advance planning on the part of administrators, trustees, and those who provide funds for capital purposes.

Part I

New Construction and Rehabilitation on College Campuses, 1959-60

The fiscal year 1959-60 saw more construction completions on college campuses (as expressed in dollar expenditures) than were accomplished in any previous year for which construction projects were reported, either for Part 1 of the College and University Facilities Survey[1/] or for the series of Higher Education Planning and Management Data.[2/] The amounts reported were for buildings only--not land or campus improvements or equipment other than built-in.

Of the 1,917 institutions receiving questionnaires for 1959-60 data,[3/] 1,458 (76 percent) responded: 555 of the 680 publicly controlled institutions (82 percent) and 903 of the 1,237 privately controlled institutions (73 percent). In terms of opening fall degree-credit enrollment, these response rates represented 92 percent of the students at public institutions and 82 percent of those at private institutions.

Responding institutions reported 1,374 new construction and rehabilitation projects completed in 1959-60 at a total outlay of $828,231,000. Public institutions, which had 61 percent of the enrollment of reporting institutions, spent $531,423,000, or 64 percent of the total. (A rough estimate of the expenditures for total public and total private institutions can be ascertained by dividing reported expenditures for each group by the respective enrollment response rate shown above.)

Expenditures for new construction were $802,450,000, or 97 percent of the total; rehabilitation totaled $25,781,000, or 3 percent. (For new construction only this was an increase of 37 percent over the previous year's expenditures; however, rehabilitation projects were 37 percent below the previous year's expenditures.) Expenditures for new construction completed by public institutions totaled $520,519,000, or 65 percent of the new construction total, and those by private institutions $281,931,000, or 35 percent of the new construction total. Rehabilitation projects completed that year cost public institutions $10,903,000, or 42 percent of the total for rehabilitation, and private institutions $14,877,000, or 58 percent.

The average cost per project for new construction was $703,904 for all institutions. For public institutions it was $754,375, and for private institutions, $626,513. Public institutions have enrollments that average somewhat larger than those of private institutions and so tend to build larger structures. Appendix A identifies projects completed by respondents in 1959-60, grouped by primary function, and shows the reported costs.

Expenditures Distribution by Functional Group

Table 1 shows the distribution of combined new construction and rehabilitation expenditures by functional group of facilities and by control. (Tables are at the end of each part.) The number of projects, dollar amounts, and percentages are given for each of five functional groups: instructional, research, general, residential, and "other auxiliary." Residential facilities were segregated from other auxiliary facilities in conformance with the pattern for other Office of Education studies of college and university facilities.

For total expenditures, public and private, it will be seen that instructional facilities received the largest share of construction and rehabilitation expenditures, over $336 million, or 41 percent. Residential facilities were second in amount, $288 million, or 35 percent. Other auxiliary facilities, such as college unions ($60 million) and food service facilities ($26 million), were next with a total of $97 million, or 12 percent. General buildings, such as heating plants, maintenance shops, and auditoriums, took $60 million, or 7 percent; and research facilities got $48 million, or 5 percent.

Public institutions devoted a larger share of their total expenditures to instructional facilities than did private institutions, 43 percent vs. 36 percent. In each of the other four functional categories, the public institutions spent a reciprocally smaller percentage of their funds than did private institutions.

Private institutions spent a slightly larger portion for residential facilities, 37.1 percent, than they did for instructional, 35.7 percent. For instructional, research, and general facilities combined, private institutions spent 49 percent of their total outlay; the corresponding percentage figure for public institutions was 56. Private institutions spent a greater percentage of their total expenditures for auxiliary facilities than did public institutions, 13.8 percent vs. 10.5 percent; the same is true for research, 6.1 percent vs. 5.6 percent.

New Construction Expenditures

Data for new construction only were divided by institutional control into three functional groupings: (1) instructional, research, and general combined; (2) residential; and (3) other auxiliary. Instructional, research, and general facilities received 53 percent of the total expenditures, or $426,607,000. (See table 2.) Residential buildings got 35 percent, or $281,798,000; and other auxiliary facilities got 12 percent, or $94,045,000.

Public institutions, in distributing their funds for new facilities, devoted 56 percent to instructional, research, and general buildings, or $289,924,000. They spent 34 percent, or $176,590,000 on residential facilities; and 10 percent, or $54,005,000, on other auxiliary facilities.

Private institutions spent 49 percent, or $136,683,000, for instructional, research, and general facilities; 37 percent, or $105,208,000, for residential; and 14 percent, or $40,040,000, for other auxiliary facilities.

Increase in New Construction Over 1958-59

By far the greatest percentage of increase in construction of new facilities completed in 1959-60 occurred in the category of other auxiliary facilities. Both public and private institutions more than doubled in dollar expenditures in this area. College unions and food facilities together increased from $44,733,000 in 1958-59 to $85,412,000 in 1959-60. In the other categories, increases were on the order of 37 percent. By functional group, the percentages of increase were: instructional, research, and general, 33 percent; residential, 30 percent; and other auxiliary facilities, 106 percent.

Rehabilitation Expenditures

Table 3 presents rehabilitation expenditures in the same manner as were shown new construction expenditures in the previous table. Here it is seen that facilities for instructional, research, and general functions

received 68 percent of total rehabilitation expenditures, or $17,524,000. Residential buildings got 22 percent, or $5,710,000. Other auxiliary buildings got 10 percent, or $2,547,000. Public institutions distributed their rehabilitation expenditures as follows: 77 percent to instructional, research, and general facilities; 8 percent to residential; and 15 percent to other auxiliary buildings. Percentage distribution of private institutions for rehabilitation was 61 percent to instructional, research, and general facilities; 33 percent to residential; and 6 percent to other auxiliary buildings.

Expenditures Within Each Functional Group

Some comprehension of the magnitude of the construction and rehabilitation effort for the year may be had from a listing of project types and amounts under each functional group:

No. of Projects	Functional Group and Primary Function	Total Cost
	Instructional	
10	Demonstration school	$ 5,957,000
6	Fieldhouse	2,837,000
32	Gymnasium	14,095,000
3	Home management laboratory	48,000
231	Instructional classroom	176,907,000
70	Library	40,730,000
2	Museum	678,000
95	Instructional laboratory	67,929,000
4	Swimming pool	1,034,000
7	Teaching hospital	21,623,000
20	Other instructional	4,526,000
480	Total instructional	$336,364,000
	Research	
35	Agricultural research	$ 8,204,000
1	Astronomy	275,000
11	Biological research	4,652,000
7	Chemistry research	4,659,000
3	Mathematics and statistics	3,022,000
8	Physics research	3,976,000
2	Other physical sciences	824,000
9	Engineering research	1,830,000
20	Medical research	21,587,000
96	Total research	$ 48,029,000
	General	
26	Administration building	$ 8,011,000
13	Auditorium	8,143,000
8	Chapel	2,836,000
2	Extension or experiment station	162,000
3	Faculty club	487,000
1	Garage	58,000
4	Nonteaching hospital	933,000
24	Maintenance shop	3,630,000
33	Multipurpose	14,006,000
13	Office building	4,430,000
6	Stadium	1,898,000
3	Theater	664,000
28	Power and heating plant	13,871,000
5	Warehouse	236,000
7	Other general	373,000
176	Total general	$ 59,738,000
	Residential	
8	Faculty apartment	$ 1,829,000
20	Faculty-staff house	915,000
34	Fraternity and sorority house	4,354,000
2	Hotel-type accommodation	935,000
49	Married student apartment	37,388,000
167	Men's residence hall	98,268,000
144	Women's residence hall	81,727,000
6	President's home	371,000
24	Residence hall with separate units for men and for women	64,174,000
8	Other residential	1,547,000
462	Total residential	$287,508,000
	Other auxiliary	
68	College union	59,894,000
53	Food facilities	25,518,000
19	Infirmary (student health)	7,338,000
20	Other auxiliary	3,842,000
160	Total other auxiliary	$ 96,592,000
1374	Grand total	$828,231,000

Expenditures Distribution by Region

Table 4 and figure 1 present the regional distribution of higher education enrollment and of combined expenditures for new construction and rehabilitation, for public and private institutions. It is interesting to note the close correlation between enrollments and expenditures on a regional basis.

Among public institutions, the North Atlantic region, with 15.7 percent of the total public enrollment, spent 17.2 percent of the total public expenditures. The Great Lakes and Plains region, with 30.7 percent of the total public enrollment, spent 29.9 percent of the total public outlay. The Southeast, with 17.1 percent of the public enrollment, spent 18.2 percent of the total public expenditures. The West and Southwest, with 36.5 percent of the public enrollment, spent 34.7 percent of the total public expenditures.

Among private institutions, the North Atlantic, with 46.5 percent of the private enrollment, spent 48.7 percent of the total private expenditures. The Great Lakes and Plains, with 27.8 percent of the private enrollment, spent 21.6 percent of the total private expenditures. The Southeast, with 11.6 percent of private enrollment, spent 12.6 percent of the total private expenditures. The West and Southwest, with 14.1 percent of the private enrollment, spent 17.1 percent of the total private expenditures.

As in the preceding year, the private institutions in the North Atlantic region, which has the largest concentration of the older schools, spent most for rehabilitation in proportion to enrollments and to total expenditures.

Unit Costs

Unit construction costs--that is, the cost per square foot for new construction and for rehabilitation--were computed on the 1,128 projects wherein both the number of square feet and the cost had been reported (99 percent of the new construction reported and 92 percent of the rehabilitation reported). On new construction, the square-foot cost was computed by control, region, and functional group, but on rehabilitation, only the aggregate cost per square foot was computed, emerging as $9.00. Rehabilitation projects represent only 3 percent of total expenditures and are too nonstandard and miscellaneous in nature to yield meaningful results in direct comparisons by categories.

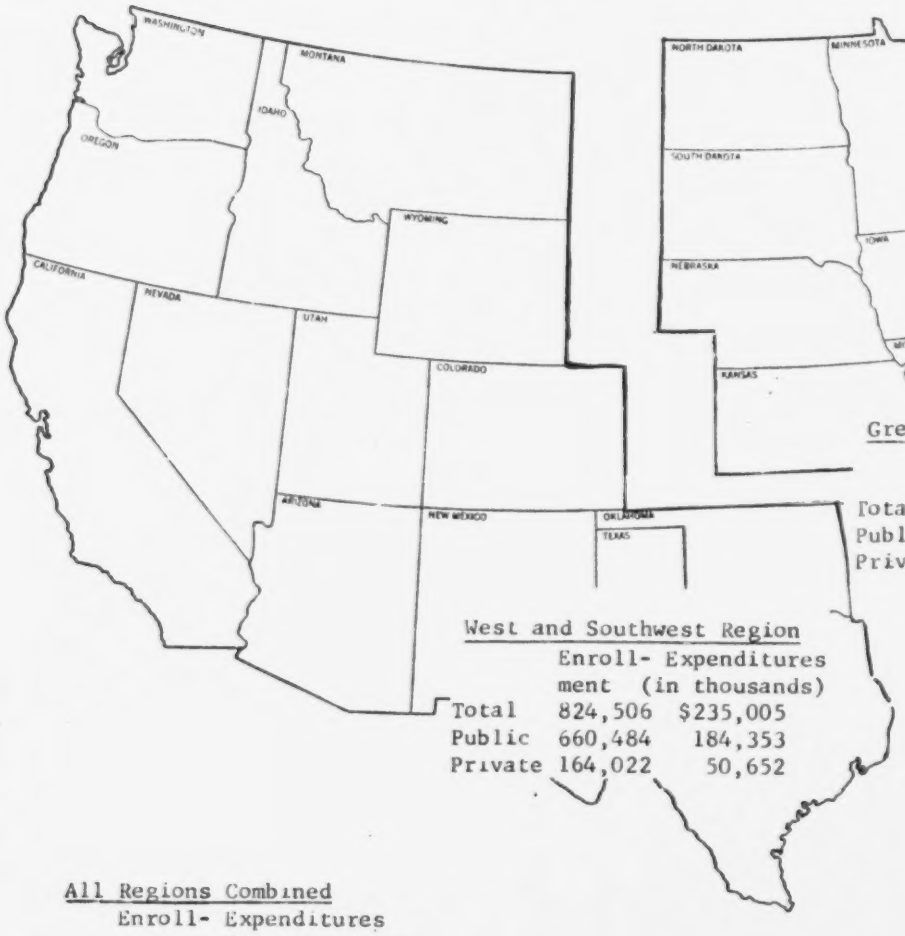
The cost per square foot of all functional groups of new construction in all regions, public and private, for buildings reported as completed in 1959-60, was $19.90. For public institutions the cost was $19.10, and for private institutions, $21.40. (See table 5.) Instructional, research, and general facilities cost $21.60 per square foot, $20.70 public and $23.90 private. Residential facilities cost $17.30, $16.60 public and $18.60 private; other auxiliary facilities cost $21.60, $21.00 public and $22.50 private.

Unit costs by region are seen in table 6. The Southeast had the lowest unit cost, $19.00 per square foot. The West and Southwest was next lowest at $19.20, followed by the Great Lakes and Plains, $19.60, and the North Atlantic, $21.40. The greatest regional variation in total unit cost occurred in auxiliary facilities, ranging from $18.00 per square foot in the West and Southwest to $25.00 in the North Atlantic. The greatest regional variation in unit cost among public institutions was also in auxiliary facilities, from $17.20 per square foot in the West and Southwest to $25.60 in the North Atlantic. The greatest regional variation in unit cost among private institutions occurred in facilities for instructional, research, and general purposes, from $17.40 per square foot in the Great Lakes and Plains to $26.60 in the North Atlantic.

The variation in auxiliary facilities might be due to a prevalence range from infirmaries, usually quite costly, to print shops. The variation in instructional, research, and general facilities might result from a prevalence range from teaching hospitals to fieldhouses.

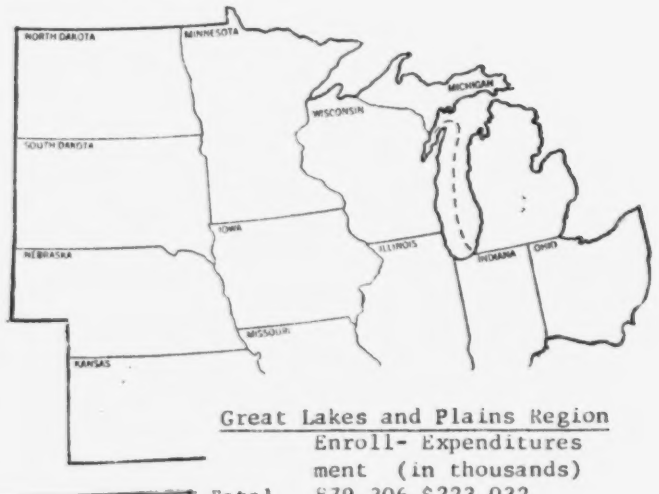
Unit cost of all new construction increased 4.7 percent over the previous year. Instructional, research, and general facilities increased 3.8 percent; auxiliary, 6.4 percent; and residential, 3.6 percent.

Figure 1. --Regional distribution of enrollment of responding institutions and their expenditures for new construction and rehabilitation completed in 1959-60



West and Southwest Region

	Enrollment	Expenditures (in thousands)
Total	824,506	$235,005
Public	660,484	184,353
Private	164,022	50,652

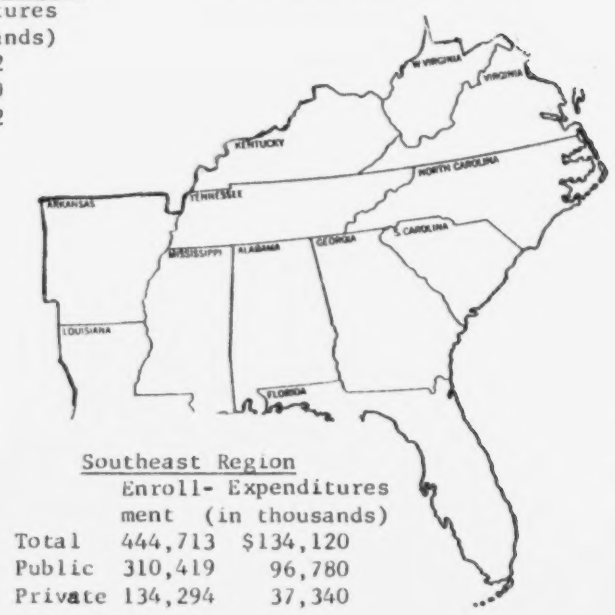


Great Lakes and Plains Region

	Enrollment	Expenditures (in thousands)
Total	879,306	$223,032
Public	555,940	158,890
Private	323,366	64,142

North Atlantic Region

	Enrollment	Expenditures (in thousands)
Total	823,141	$236,074
Public	283,428	91,400
Private	539,713	144,674



Southeast Region

	Enrollment	Expenditures (in thousands)
Total	444,713	$134,120
Public	310,419	96,780
Private	134,294	37,340

All Regions Combined

	Enrollment	Expenditures (in thousands)
Total	2,971,666	$828,231
Public	1,810,271	531,423
Private	1,161,395	296,808

The unit cost for public institution construction increased 3.8 percent; instructional, research, and general increased 1.5 percent; auxiliary, 6.1 percent; and residential, 3.8 percent. The unit cost for private institution construction increased 5.4 percent for all functional types: 9.6 percent for instructional, research, and general; 6.6 percent for auxiliary; and 2.2 percent for residential.

The square-foot cost of rehabilitation, $9.00, represented an increase of 20 percent over the previous year.

Sources of Funds

Since there is a considerable degree of disparity between fund sources of public and of private institutions, especially as to the portion of their construction funds received for particular functional purposes, table 7 shows only the percentage distribution of fund sources for each control and does not combine public and private institutions.

Public institutions. --For all types of function, public institutions' chief source of construction funds was appropriations, 44 percent. The next source in order was revenue bonds with 31 percent. Tax levies provided 6 percent. No other single category of source yielded over 5 percent, although State general obligation bonds did provide 4.7 percent. (See table 7.)

For the separate functional purposes of facilities, there was a wide diversity of source patterns, especially distinguishing the instructional, research, and general facilities from residential and other auxiliary types in public institutions. Instructional, research, and general facilities were built with appropriated funds to the extent of 63 percent, but residential only to 19 percent and other auxiliary to 25 percent. General obligation bonds took care of 16 percent of instructional, research, and general facilities but less than 4 percent of either residential or other auxiliary types. Direct tax levies at State and local level provided 10 percent of instructional, research, and general facilities for public institutions.

Residential facilities at public institutions were built with proceeds of revenue bonds to the extent of 70 percent (56 percent from the Housing and Home Finance Agency), and other auxiliary facilities were built with revenue bonds to 56 percent (23 percent HHFA). Gifts and grants supplied very little money to public institutions for residential and other auxiliary facilities, and only 5 percent for instructional, research, and general facilities.

Private institutions. --The most productive single source of funds for construction among private institutions was that denoted as "gifts and grants," 38 percent. Next in order were revenue bonds, 31 percent, nearly all of this from HHFA. Amounts from other sources are widely spread: 8 percent borrowed from endowment funds, 7 percent borrowed from private and commercial sources, 5 percent from current funds, 4 percent borrowed from other college funds, 4 percent from Federal appropriations, and 3 percent from all other sources.

For instructional, research, and general facilities, gifts and grants provided 59 percent of expenditures by private institutions, Federal appropriations 7 percent, and State appropriations 2 percent. Borrowings from private and commercial sources provided 8 percent, from endowment funds 6 percent, and from other college funds 6 percent. Current funds provided 7 percent.

Revenue bonds provided private institutions with 64 percent of the cost of residential facilities and 46 percent of the cost of other auxiliary facilities, in each case nearly all HHFA loans. Gifts and grants provided 12 percent of the residential facilities funds and 31 percent of funds for other auxiliary facilities. In the case of other auxiliary facilities, 11 percent of funds were obtained by borrowing from private and commercial sources. Borrowings from endowment funds provided 11 percent of funds for residential facilities.

Comparisons with 1958-59. --The pattern of sources for construction funds appears not to change to any dramatic degree from year to year. Reference to tables of sources of funds for the previous year of 1958-59 reveals very few percentage changes of over 3 percentage points. For all functional types, public institutions increased the portion coming from direct tax levies from 3 percent in 1958-59 to 6 percent in 1959-60. Private institutions used proceeds from HHFA borrowing 4 percentage points more (from 26 up to 30 percent) and were reciprocally less dependent upon gifts and grants (41.3 percent down to 37.8 percent) and current funds (8.2 percent down to 5.6 percent). Borrowing from endowment funds rose from 4.8 percent in 1958-59 to 7.6 percent in 1959-60.

For instructional, research, and general buildings, public institutions revealed a slight shift from State appropriations to Federal appropriations and State direct tax levies. Private institutions, for this type of building, realized an increased portion from appropriations, up from 6.3 percent to 10.5 percent, but less from current funds, from 11.5 percent down to 7.1 percent.

For residential buildings, public institutions obtained a significantly larger share from State appropriations, from 6.5 percent up to 17.2 percent. The reciprocal decreases occurred in State general obligation bonds (from 8.9 percent down to 2.9 percent) and in funds borrowed from private and commercial sources (from 7.8 percent down to 2.6 percent). Private institutions reduced their borrowing from private and commercial sources for residence facilities from 7.0 percent to 3.3 percent.

For other auxiliary functions, public institutions increased their use of State appropriations from 20 percent in 1958-59 to 25 percent in 1959-60. Use of revenue bonds by public institutions rose from 40 percent to 56 percent. Construction funds from general obligation bonds for public institutions reduced from 13 percent to 4 percent.

Part II

New Construction and Rehabilitation on College Campuses, 1960-61

Respondents reporting new construction and rehabilitation completed in 1960-61 represented 76 percent of the higher education institutions, 1,486 of 1,964 queried: 78 percent of the public institutions (533 of 680) and 74 percent of the private institutions (953 of 1,284). In terms of opening fall degree-credit enrollment, the respondents represented 91 percent of the students at public institutions and 91 percent of those at private institutions.

These institutions reported 1,393 new construction and rehabilitation projects costing $811,923,000. Of this total, public institutions completed 707 projects at a cost of $482,448,000 and private institutions completed 686 at a cost of $329,475,000. (See tables 8 and 9.) The total cost was lower by 2 percent than that reported by respondents to the previous year's study, also a 76-percent response. Based upon data collected in the annual survey, the previous year had seen more construction completions, by cost, than any year on record. However, for private institutions only, the cost for 1960-61 exceeded that of the previous year by 11 percent and was the highest amount so far. The regions in which a reduction occurred in construction by public institutions were North Atlantic, Southeast, and West and Southwest.

Of the total cost, 7 percent was spent for rehabilitation, whereas in the previous year only 3 percent went for that purpose. The average cost per project for new construction only was $798,416 in public institutions and $607,757 in private institutions. Appendix B identifies projects completed by respondents in 1960-61, grouped by primary function, and shows the reported costs.

Expenditures Distribution by Functional Group

Distribution of total new construction and rehabilitation expenditures by functional group of facilities shows that $340 million (42 percent) went for instructional facilities (table 10). Of this general group, $179 million was spent for classroom buildings, $50 million for instructional laboratories, and $39 million for libraries. Residential facilities required $258 million, 32 percent. Men's residential buildings required $100 million of this residential total and women's residential buildings $99 million. Married students' apartments costing $28 million were completed, as were twelve residential halls with separate units for men and for women, costing $16 million.

For new construction only the percentage distribution among the five functional groups was as follows: Instructional, 41; research, 8; general, 8; residential, 33; and other auxiliary, 10. Total rehabilitation percentage distribution was: Instructional, 48; research, 4; general, 22; residential, 20; and other auxiliary, 6.

These distribution tendencies conform to the general pattern of previous years. (The reciprocal nature of variations should be acknowledged; whenever one categoric segment or percent of a whole "pie" increases, the other segments must perforce be reduced, even when their numerical value does not change.)

Public vs. private institutions.--Private institutions surpassed public institutions in dollar amount of expenditures for new construction in only one category, that of research facilities.

Comparing functional percentage distribution of new construction, private vs. public, it is noted that for new instructional facilities the proportion of their funds spent by public institutions was 46 percent vs. 35 by private. The reciprocal of this differential is found in higher percentages for private institutions in research, general, and residential facilities--mostly residential, 37 percent vs. 30. For rehabilitation expenditures, comparisons reveal the same general differences as noted for new construction but more emphatically: Instructional, 57 percent of public funds vs. 39 percent of private funds; and residential, 30 percent of private rehabilitation funds vs. 10 percent of public funds.

Expenditures Within Each Functional Group

Tables 11A, 11B, and 11C (for total, public, and private institutions respectively) distribute the number and cost of new construction and rehabilitation projects by primary function. Among the leading primary functions in order of total amount spent for new construction only were: Instructional classroom buildings, $169 million; women's residence and men's residence halls, $95 million each; instructional laboratories, $48 million; college unions, $43 million; libraries, $36 million; married students' apartments, $27 million; gymnasiums, $26 million; food service facilities, $24 million; teaching hospitals, $22 million; and medical research, $21 million. When considered separately by control, the chief change in order of amounts is that libraries occur lower in the scale for public institutions for that year, and instructional laboratories occur lower for private institutions.

Among 109 research facilities costing $65 million (8 percent of the total expenditures) were 21 medical research facilities costing $21 million. College unions, numbering 58, required $44 million of the total of $78 million for auxiliary facilities (other than residential), which amount was 10 percent of the total expenditures; food service facilities took $26 million more of the total for this category. Among the 183 general facilities completed during 1960-61, there were 15 listed types totaling $71 million or 9 percent of total expenditures; of these, 30 administration buildings cost $16 million.

Expenditures Distribution by Region

Table 12 distributes the expenditures for new construction and rehabilitation separately, by functional group, region, and control. Table 13 distributes percentages for total new construction and rehabilitation expenditures by region and control, and provides a rough basis for comparison of that distribution with the respective regional opening fall enrollment of respondents. (See figure 2.)

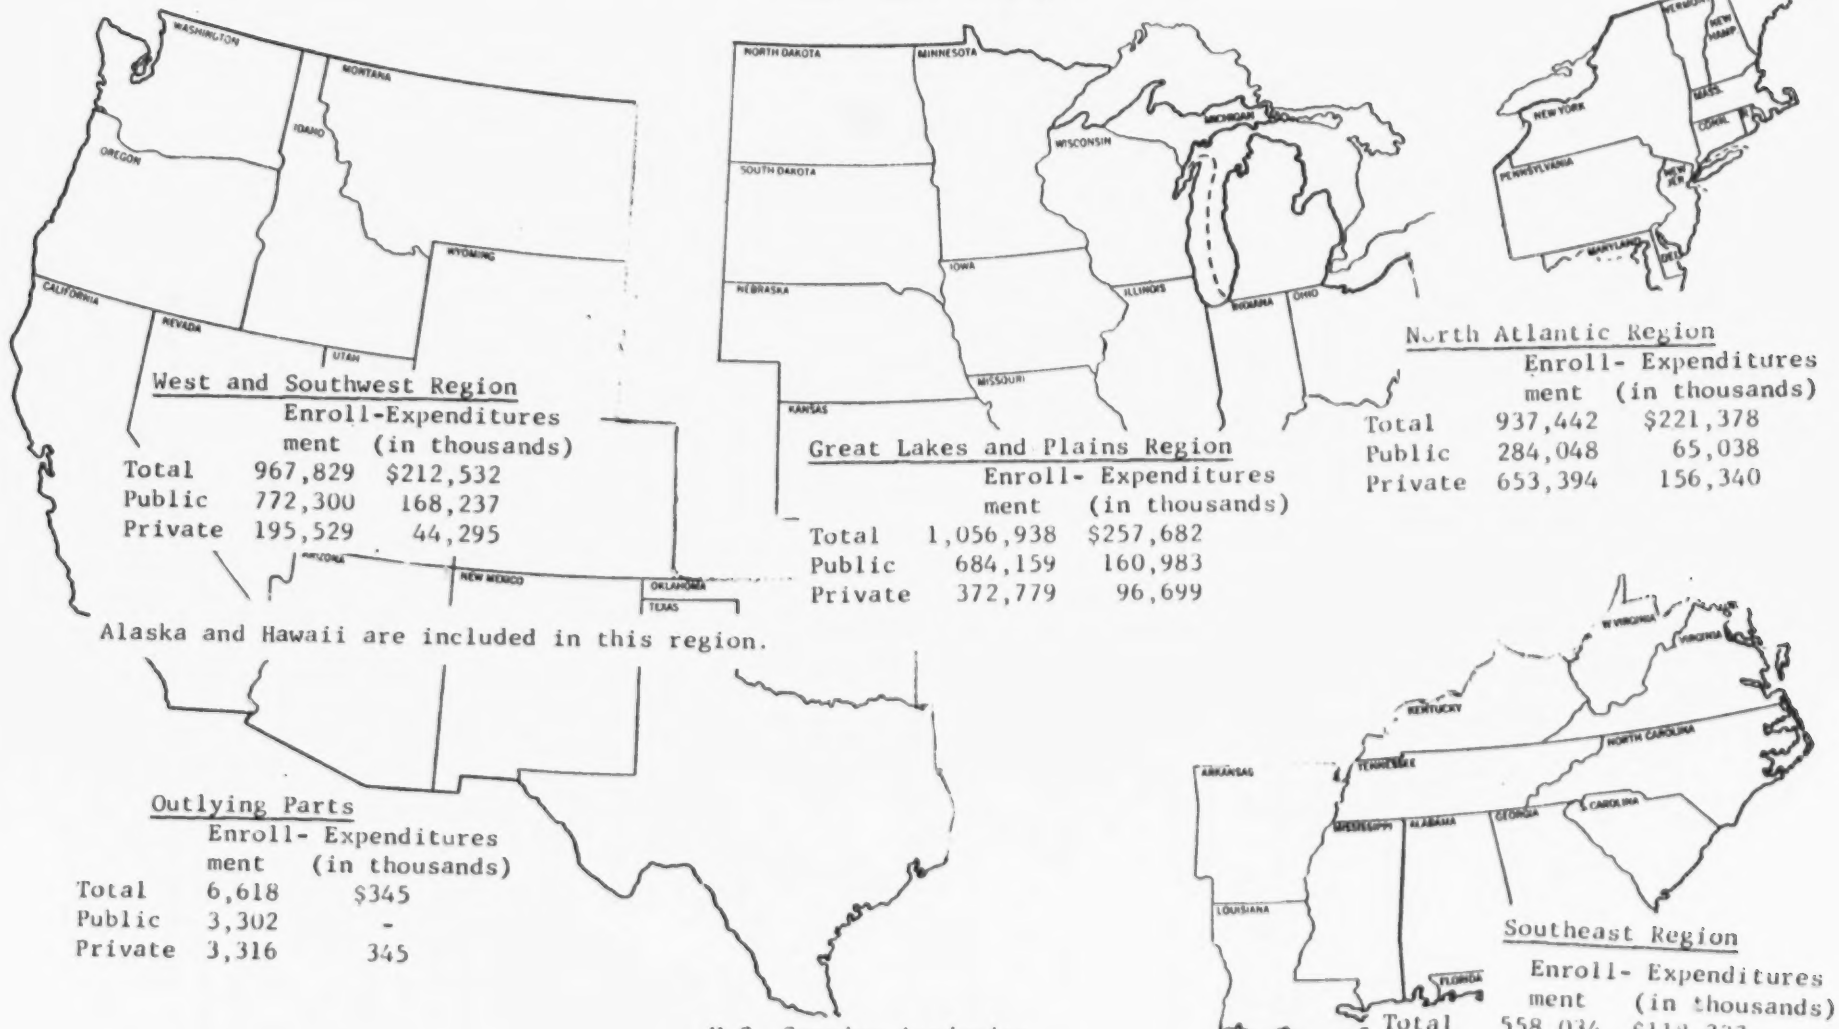
For public institutions the distribution of expenditures parallels the enrollment distribution within a few percentage points. The principal variations are that the Great Lakes and Plains region, with 31.9 percent of public enrollment, spent 33.4 percent of public expenditures, and the West and Southwest region, with 36.0 percent of public enrollment, spent 34.9 percent of public expenditures. For private institutions the variations were mostly minor, the largest occurring in the Southeast, which had 12.2 percent of private enrollment and spent 9.7 percent of private expenditures.

States in which expenditures of public institutions for new construction ranked high were: California, $86 million; Ohio, $31 million; Indiana, $29 million; Texas, $21 million; Pennsylvania, $20 million; Michigan, $17 million; and West Virginia, $16 million. Private institutions scored most heavily in New York, $42 million; Pennsylvania, $36 million; Illinois, $25 million; Massachusetts, $24 million; California, $19 million; and Ohio, $18 million. (See table 8.)

Sources of Funds

When analyzing source data as a whole for indications of trend it may be necessary to compensate for certain factors other than

Figure 2.--Regional distribution of enrollment of responding institutions and their expenditures for new construction and rehabilitation completed in 1960-61



West and Southwest Region

	Enrollment	Expenditures (in thousands)
Total	967,829	$212,532

U.S. Service Academies

	Enrollment	Expenditures (in thousands)
Total (all public)	11,069	$1,649

purely source data. For example, if in certain years there has been a significantly larger-than-average proportion of self-liquidating projects completed, such as dormitories, it should be axiomatic (other factors remaining constant) to find revenue bonds supplying a relatively larger percent of the total funds for those years. An apparent trend would not be confirmed until that ingredient had been identified and discounted.

Since the distribution of sources of funds for construction of facilities is for the most part different for public institutions than for private institutions, their sources were analyzed separately.

Public institutions.--In this study the rank of sources by amount for new construction in public institutions was as follows:

Source	Amount	Percent
Total	$456,537,000	100.0
Governmental appropriations	172,250,000	37.7
Revenue bonds	142,893,000	31.3
General obligation bonds	75,600,000	16.6
Gifts and grants	21,627,000	4.7
Direct tax levy	17,967,000	3.9
Borrowed from commercial sources	11,642,000	2.6
All other sources (4 categories)	14,558,000	3.2

Table 14A shows sources of funds for public institutions by functional group of facilities, for new construction and for rehabilitation. Table 15 includes the same distribution in percentages. Table 16 shows source distribution by region and control for new construction only and table 17 by type of institution and by control for new construction only.

Studying these source tables for significant variations or indications of trend brings the following observations: (1) The relatively large proportion, 25 percent, of general facilities expenditures in public institutions for which the source was gifts and grants appears to have resulted from several large structures identified as a theater ($1,926,000), an educational office building ($2,000,000), a multipurpose building ($2,107,000), and an administration building ($560,000)--all built with donated funds; and (2) In making comparisons with previous studies as to relative use of sources, the only noticeable indication is in the consistent annual increase since 1956 in the use of general obligation bonds by public institutions. (See figure 3.) This trend is observable for instructional, research, and general functional facilities as a combined group. There is evidence of a reciprocal down-trend in governmental appropriations as a source, indicating a possible tendency toward shifting the burden of capital support to future generations of taxpayers.

Private institutions.--For private institutions the list of sources in order of amount was:

Source	Amount	Percent
Total	$302,663,000	100.0
Gifts and grants	131,045,000	43.3
Revenue bonds	69,430,000	22.9
Borrowed from commercial sources	29,184,000	9.7
Current funds	26,053,000	8.6
Governmental appropriations	14,192,000	4.7
All other sources (4 categories)	32,759,000	10.8

Table 14B shows sources of funds for private institutions by functional group of facilities, for new construction and for rehabilitation. As was done for public institutions, table 15 shows for private institutions the percentage distribution of the same amounts; table 16 presents distribution of expenditures by region and by control and table 17 by type of institution and by control, both tables for new construction only.

There is a tendency among private institutions to dispose of a higher percentage of their revenue bonds through the Housing and Home Finance Agency than is indicated for public institutions. Trends in sources for private institutions are illustrated in figure 4.

Figure 3.--Sources of funds expended by public higher education institutions for new construction and rehabilitation, 1951-52 to 1960-61

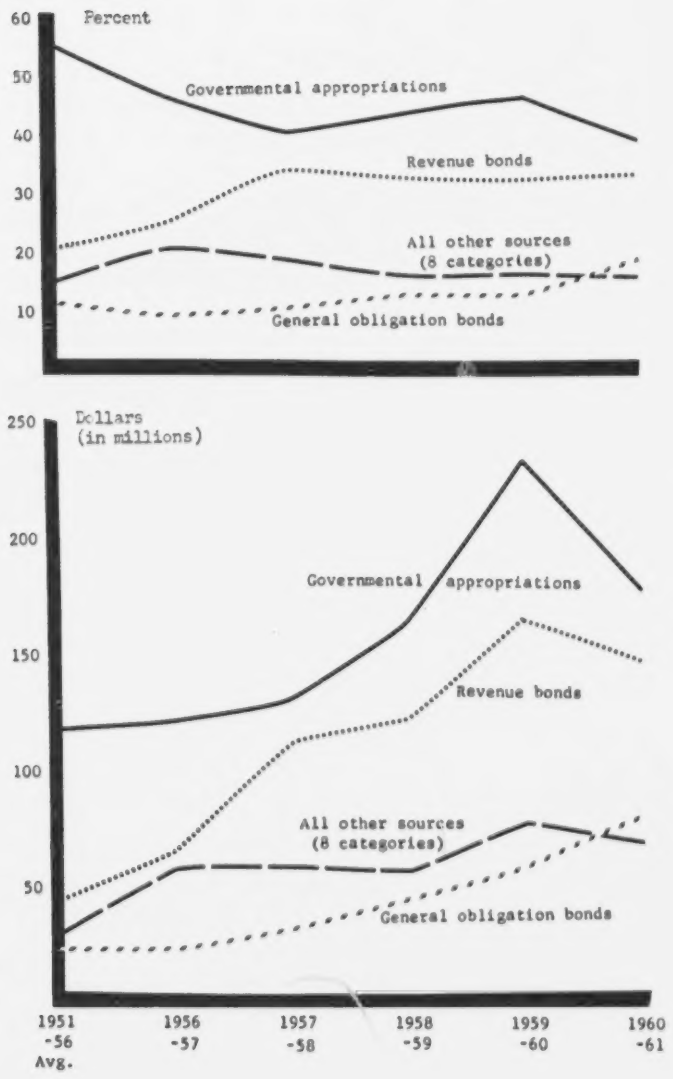

Figure 4.--Sources of funds expended by private higher education institutions for new construction and rehabilitation, 1951-52 to 1960-61

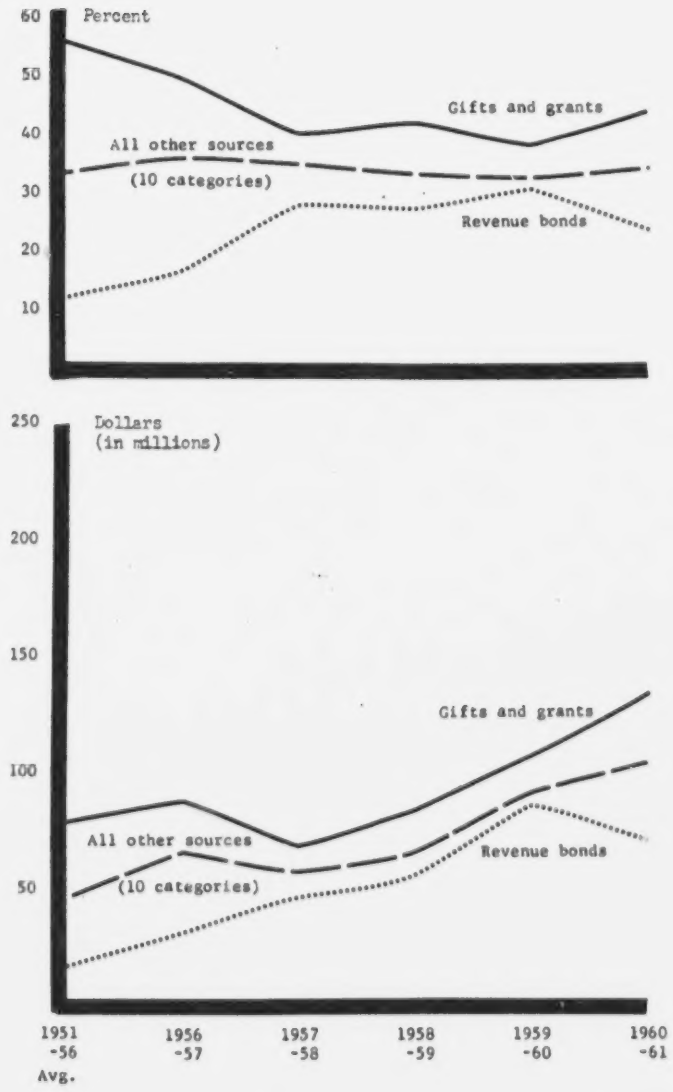

Revenue bonds occupied second place in both public and private institutions, and when combined for public and private institutions they amounted to $212,323,000, the largest single source of funds. On two-thirds of this total the bonds were disposed of through the Housing and Home Finance Agency.

By region.--The public institutions of the West and Southwest region relied more heavily (41 percent) upon governmental appropriations for their capital funds than did the public institutions of any other region. The public institutions of the Great Lakes and Plains region were not far behind (40 percent). (See table 16.) The public institutions of the North Atlantic region obtained a smaller percentage (28) from governmental appropriations than did any other region. As a reciprocal, this region used general obligation bonds to provide capital to a very great extent, 45 percent (19 percent from the States and 18 percent locally).

Revenue bonds were used more heavily by the public institutions of the Southeast (45 percent) than by any other region. This emphasis may be related to the high percentage of students in that region who are housed on campus.

Private institutions of the Southeast also depended upon revenue bonds (33 percent) more than did any other region, to supply capital funds. These institutions in the West and Southwest region and the Southeast obtained more than half of their capital funds from gifts and grants, 53 percent and 50 percent respectively.

By type of institution.--Public professional schools obtained a larger percentage of their construction funds from governmental appropriations than did any other type of public institution, 61 percent (table 17). This percentage was almost equally divided between State governments (32 percent) and Federal agencies (29 percent). Public liberal arts colleges also obtained a high percentage (54) of their capital funds from governmental appropriations. Public technological schools received only 14 percent of their capital funds from governmental appropriations, but as a reciprocal they obtained a very high percentage (69) from general obligation bonds, mostly State bonds. Public teachers colleges relied heavily upon revenue bonds for construction funds (43 percent, the major portion of which came from the Housing and Home Finance Agency) for dormitories, food service facilities, and college unions. (The one project by a public professional school financed by borrowing from the endowment fund, which resulted in a 34.6 percent figure in that column, would appear to be contrary to the prevailing pattern.)

Private professional schools (other than theological) relied on gifts and grants more heavily (67 percent) for capital funds than did any other type of institution. Private technological schools also obtained a large proportion (62 percent) from gifts and grants. Private junior colleges and liberal arts colleges both used revenue bonds heavily, 37 percent and 33 percent respectively, almost entirely HHFA.

Comparisons with 1959-60.--As compared with the previous year (see Part I), public institutions tended to rely less upon governmental appropriations (37.7 percent vs. 44.4 percent) and tax levies (3.9 percent vs. 6.1 percent) and more upon general obligation bonds (16.6 percent vs. 10.6 percent). Private institutions obtained a larger share of their capital funds from gifts and grants (43.3 percent vs. 37.8 percent) and a smaller share from other sources.
